

Bretton Woods Homeowners,

Did you know left behind poop is harmful? One common misconception about left behind dog poop is that it acts as a fertilizer. Rather than fertilizing in harms the yard, enters the water systems and our environment. Feces left to disintegrate contaminate the soil with parasites and bacteria.

We have installed 2 pet stations in Bretton Woods Community.

One is located on Maple Hill and the other on Weatherwood Drive entry. These stations will be emptied weekly.
